

### BACKGROUND

The Louisiana Public Health Institute (LPHI) administered a statewide survey to assess impacts of COVID-19 during Louisiana's Phase 2 of reopening, which permitted certain establishments to open at 50 percent capacity. A total of 1,126 adults participated, with representation from all nine Louisiana Department of Health (LDH) regions.

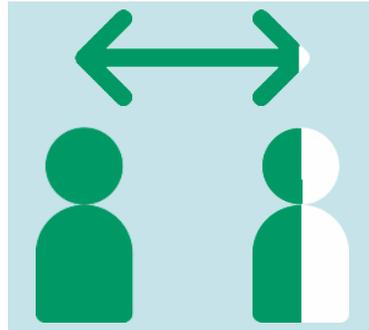

Percent Positive and Test Volume

Results show that many Louisianans are knowledgeable and worried about COVID-19 and have adopted the recommended preventive behaviors.

**Two-thirds** wear a mask all or most of the time when in public.

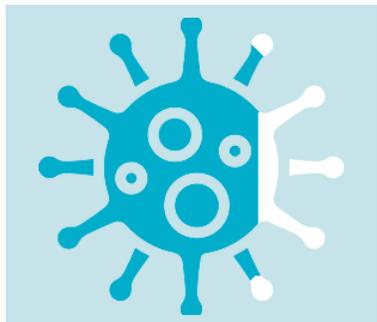

**More than 80%** practice social distancing all or most of the time.

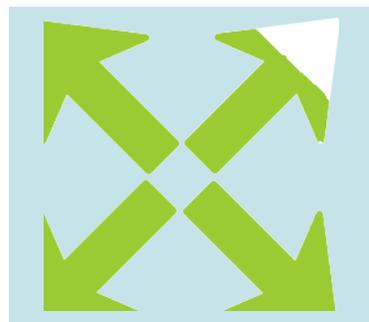

**57%** wash/sanitize their hands more frequently since the pandemic.

**Two-thirds** stay home all or most of the time.

**More than 80%** are concerned about getting COVID-19.

**90%** are concerned about the virus spreading the virus in their communities.

**More than 85%** know that people without symptoms may spread COVID-19.

**Almost one-third** of people who smoke/vape do so more since the pandemic began.
